

ExceptionHandler

```
classDiagram
    class ExceptionHandler
    class Handler {
        # $dontFlash
        + register()
    }
    Handler --|> ExceptionHandler
```

The diagram illustrates a class hierarchy. At the top is the 'ExceptionHandler' class, represented by a gray box with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. At the bottom is the 'Handler' class, represented by a white box with three horizontal compartments. The top compartment contains the class name 'Handler'. The middle compartment contains the attribute '# \$dontFlash'. The bottom compartment contains the method '+ register()'. A blue arrow with an open triangular head points from the 'Handler' class to the 'ExceptionHandler' class, indicating that 'Handler' inherits from 'ExceptionHandler'.

Handler

\$dontFlash

+ register()
